# **Getting Started with Mixxx for Icecast**

Mixxx is advanced DJ software which can be used for broadcasting. It has many features, covered in the manual Mixxx provides. Our guide will focus on simplifying its interface for basic usage and using it for broadcasting.

 Download and Install Mixxx You can download Mixxx from their website here: <u>https://www.mixxx.org/download</u> It is available for Windows, macOS, and Linux.

#### 2. Open Mixxx

A window may appear asking for you to select your audio files. You can choose your audio file location or simply close the window if you'd prefer to select them later.

### Simplifying the Interface

- 1. Open the Mixxx settings
- 2. Go to "Interface" in the sidebar and switch to the "Tango" skin.

#### **Broadcasting with Mixxx**

- 1. In the settings of Mixxx, go to "Live Broadcasting" in the sidebar.
- 2. Change the "Type" to "Icecast 2".
- 3. Set the "Mount" to "stream"
- 4. Enter your "Server IP", found in your VosCast account, into the "Host" box.
- Enter your first "Server Port" into the "Port" box. For example, if your "Server Ports" section says "7000, 7001 (SSL)", you would enter 7000 as your port.
- 6. Enter "source" into the "Login" box.
- 7. Enter your "Server Password" into the "Password" box. It can be found in  $_{\rm Page\ 2\ /\ 5}$

#### **Automatically Play Audio Files**

In Mixxx, you normally have to manually queue-up audio files and play them when you're ready to. If you aren't interested in manually DJing this way, you can use Mixxx's Auto DJ feature.

- 1. Ctrl/cmd + click the tracks you want included. Alternatively, click the first track, hold shift, and then click the last track to select them all.
- 2. Right-click the selected tracks and choose one of the "Add to Auto DJ Queue" options.

3. Go to the Auto DJ section and click "Enable Auto DJ".
