

# Mobile Devices

## How can I listen on a mobile device?

### iOS

iOS has poor native support listening to SHOUTcast stations. While you can listen in iOS's Safari browser, there is no OS integration. Using one of these apps will mean you can listen in the background and control playback with iOS's media controls.

- [All Radio](#)
- [RADYO](#)
- [TuneIn Radio](#) - Only if you've added your server to [TuneIn's directory](#).

### Android

- [ServeStream](#)
- [XiiaLive](#)
- [TuneIn Radio](#) - Only if you've added your server to [TuneIn's directory](#).

### BlackBerry

- [TuneWiki](#)
- [SCListener](#)
- [Radio for Blackberry](#)

Alternatively, most BlackBerries should be able to directly open and stream the .pls playlist file.

### Windows Phone 7, 7.5 and/or 8

- [Internet Radio Tuner](#)
- [Radio for WP7](#)
